

12 Ways to Use RDX for Exceptional DBA Support

Learn more about the variety of ways that RDX can optimize your database operations with our expert-level, reliable support. Whether you need a full-time DBA, off-hours support or expertise not available in-house, RDX can help.

Find your perfect remote DBA solution.

12 Ways to Use RDX for Exceptional DBA Support

1 Full DBA Support

Meet 100% of your database administration needs. We become your DBA team and assume complete responsibility for the functionality, security, performance, availability and improvement of your database environment. You get the expertise, availability and best practices of over 100 DBA experts for less than the cost of a single, in-house resource.

2 Supplemental DBA Support

Strengthen your existing team and obtain high-level support when and how you need it. We help you fill gaps in skill sets, improve team productivity, and manage increasing workloads without the headache or expense of hiring additional in-house resources. Expand the capacity and capabilities of your team with the help of RDX.

3 24/7 Coverage

Receive around-the-clock coverage and support needed to ensure critical issues are addressed efficiently and appropriately. Whether you need off-hours support or coverage during vacation days, sick days, and holidays, RDX is there. You will never have to worry about DBA absences, nights or weekends affecting your performance.

4 Proactive Monitoring

Obtain real-time monitoring and alert notifications for your mission-critical environments. Our Database Operations Center (DOC) is staffed with expert technicians dedicated to ensuring the availability and performance of your environment. We will notify you immediately when critical events or issues occur. Proactive monitoring is standard with DBA support or available on its own.

5 Off-Hours Support

Leverage high level, off-hours support for your database environment. We help you meet 24x7 business demands, improve team productivity and obtain complete coverage for your environment without offshoring support or burning out your DBAs. Give your team back their life and their sanity by letting RDX work the late shifts.

6 Auditing and Protection

Protect your most valuable and sensitive data from external threats and malicious insiders by being alerted to attacks in real time and terminating sessions that violate predefined security policies. Our McAfee-powered security solution helps you gain full visibility into your database activity, comply with audits, and remediate security gaps to minimize the likelihood of a breach.

(Smile - They All Result in Greater Peace of Mind)

7 Maintenance Support

Receive high-level, ongoing maintenance support for your environment. We help you improve business results, become more strategic, and free internal resources for more transformative initiatives by assuming responsibility for routine database maintenance activities. Get the ongoing support you need at a price you can afford with RDX.

8 Subject Matter Expertise

Gain access to technical expertise typically not available in-house. Our DBA experts specialize in all database disciplines. We help you handle the growth and complexity of your environment without having to hire costly, full-time resources. You'll leverage thousands of years of collective experience for a fraction of the cost of an in-house resource.

9 Insurance Policy

Use RDX as your database support insurance policy and get the 24x7 coverage and protection you need without the costs and headaches of hiring in-house. We monitor the performance and availability of your environment to ensure that all database issues are addressed quickly and appropriately, and we provide high-level support when you need it most.

10 Multi-Platform Support

Obtain high-level support and expertise for multiple platforms. Since most DBAs are only well-versed in one database technology, those working with many platforms are particularly vulnerable to mistakes. RDX helps you ensure that all platforms are expertly managed without having to hire costly in-house resources. Visit our website to see the complete list of supported platforms.

11 Platform-Specific Support

Achieve greater peace of mind with platform-specific DBA services. We offer support for all leading database platforms including SQL Server, Oracle, Oracle Apps, MySQL, DB2, and RDB. All of our product teams employ experts equipped with the skills necessary to solve your toughest challenges. Custom tailor a support package to meet your unique business needs.

12 Database Optimization

Optimize the performance, availability and security of your database environment. Poorly performing, unorganized environments affect your ability to meet business demands and maintain availability. We help you clean up and optimize your environment so you can meet growing business needs and leverage all database features and functionality quickly and efficiently.
