

## Rob Brown to Moderate Boardroom Session at Houston CIO Executive Summit

**PITTSBURGH – June 20, 2018** –RDX Chief Revenue Officer, Rob Brown, is moderating a boardroom session at Evanta’s Houston CIO Executive Summit on Tuesday, June 26, 2018. The Houston CIO Executive Summit will bring together the region’s top IT leaders to help them drive innovative and strategic solutions for today’s top IT challenges.

Rob will be moderating *Building Successful Cloud Strategies* with help from session leaders Erik Tennison from AIG and James Green from Chevron Corporation. During the session, attendees will get the opportunity to share their experiences with cloud systems and their thoughts on how business processes will need to change to meet cloud and SaaS application requirements. They will also be able to learn from their peers and use the knowledge they gained to help their organizations build and strengthen their internal cloud strategies.

“Cloud adoption rates are only going to increase over the next few years, but many IT leaders still have questions and concerns surrounding cloud systems,” said Rob. “RDX has helped dozens of organizations migrate to and administer their cloud environments. In addition, many shops have current projects underway or have already completed cloud migrations and will be able to share their experiences and lessons learned with the group. Moderating a boardroom session that focuses on building cloud strategies is a great way for us to share our own experiences and best practices while collaborating with Houston’s leading IT executives to solve some of today’s common cloud DBMS challenges.”

For more information about Rob’s boardroom session, please visit RDX’s Houston CIO Executive Summit [event page](#).

### **About RDX [Remote DBA Experts]**

Founded in 1994, RDX is one of the largest independent providers of database infrastructure and cloud management services in North America. The Company provides 24x7, 100% US-based managed services to hundreds of clients, both on premise and in the cloud. RDX supports a wide range of cloud environments including Microsoft Azure, Amazon AWS, and Oracle DB Cloud; database environments including Oracle, SQL Server, MYSQL, PostgreSQL, DB2 and MongoDB; and operating systems including Windows and all major UNIX/Linux offerings.

For over two decades, RDX has helped hundreds of organizations lower support costs while increasing data infrastructure performance and availability. RDX’s expert staff of highly-trained professionals is backed by a monitoring and support infrastructure that has been continuously improved and enhanced throughout its history.
